

GIT GUD

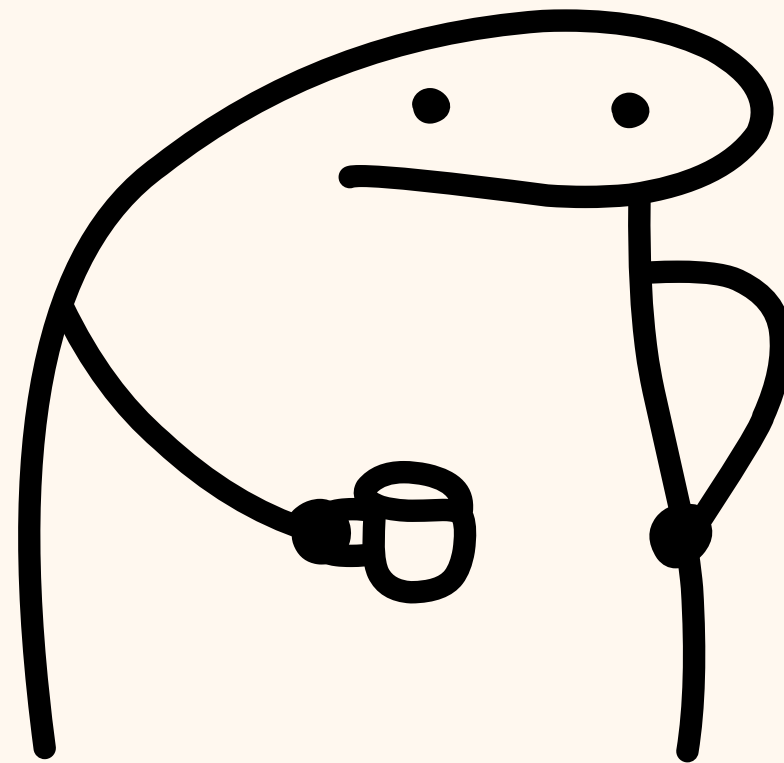

Introduction to **Version Control**, **Git tools** and
Github

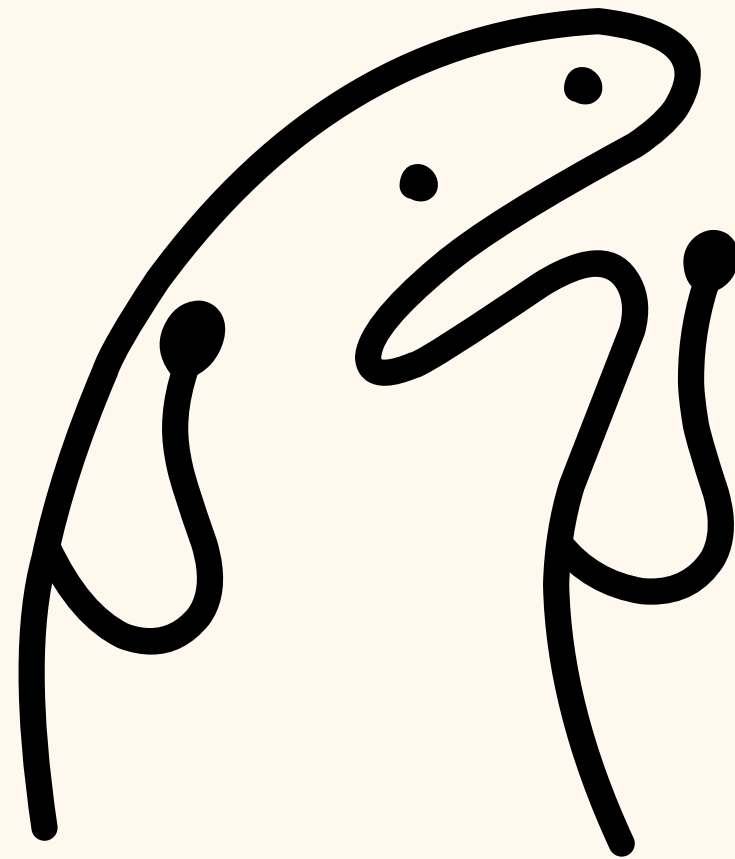

- **WHAT'S VERSION CONTROL?**
- **WHY VERSION CONTROL?**
- **WHAT'S GIT/GITHUB?**
- **HOW TO GIT?**
- **ACTIVITY** ✨🕶️🕶️

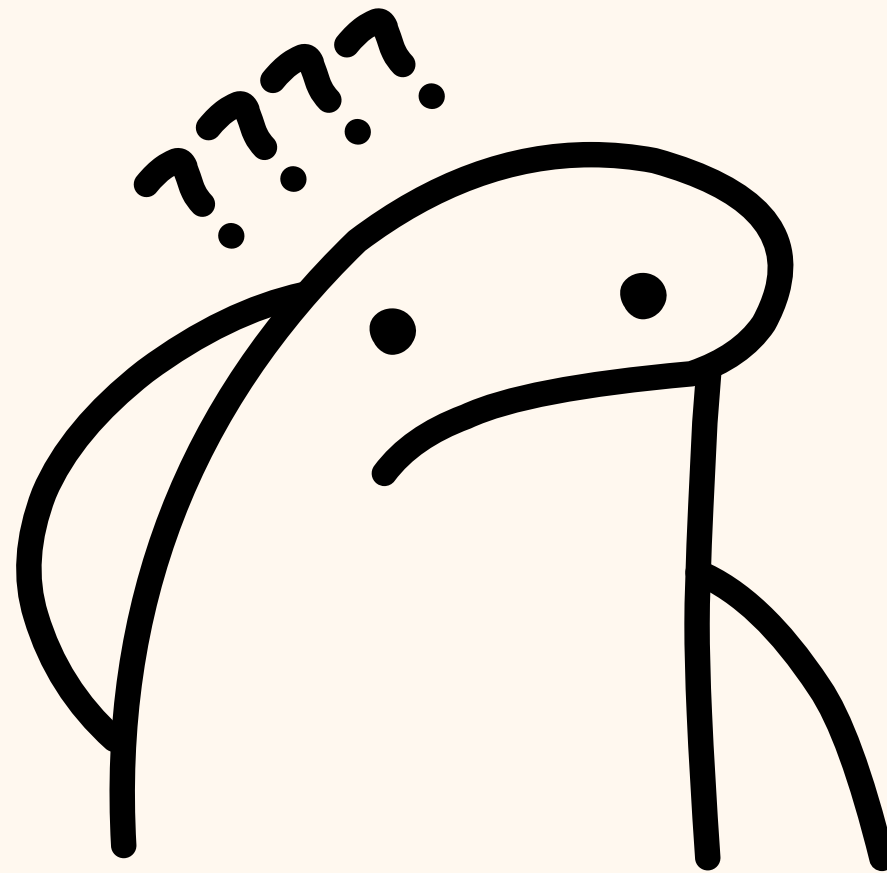

PROJECTS

PROJECT CHANGES

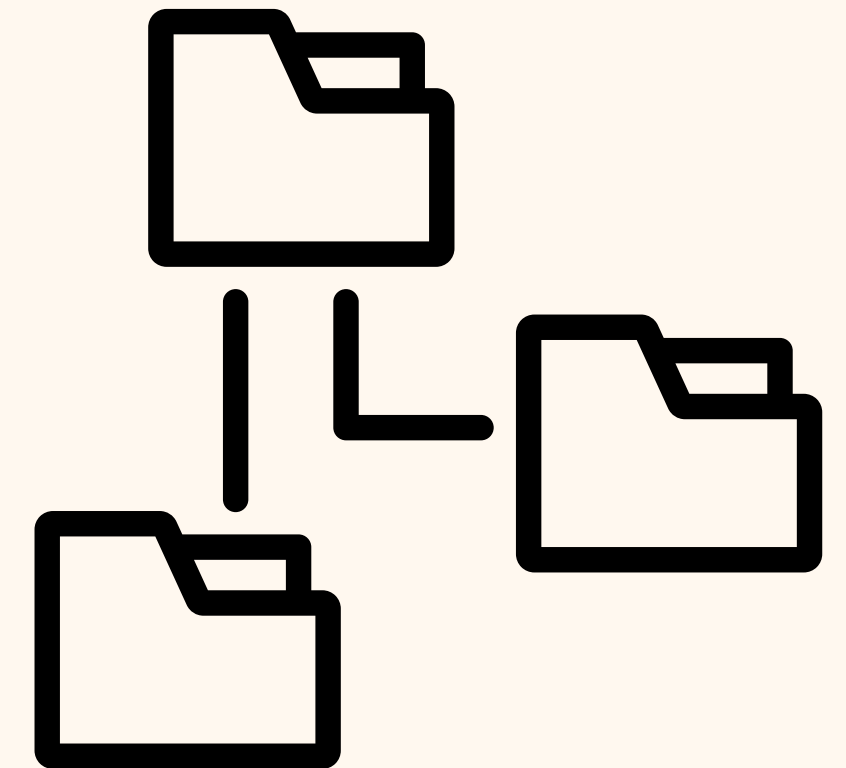

VERSION CONTROL?

Version Control

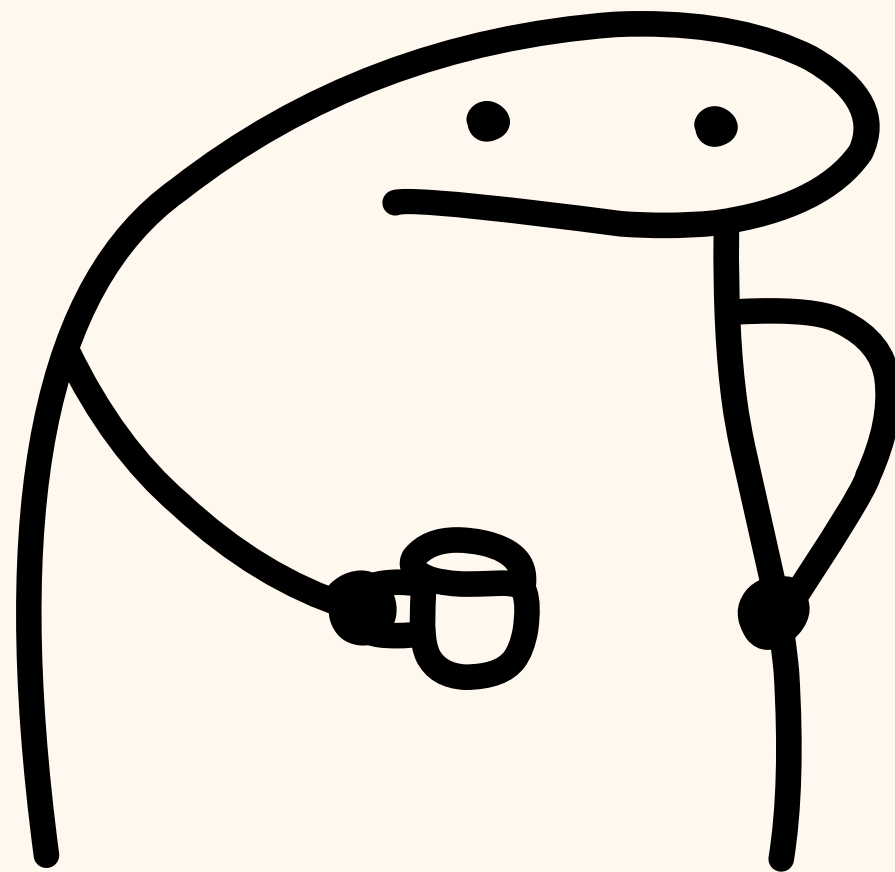

Helps you to track and manage changes to your files so that you can work safely and collaboratively.

Why Changed?

What Changed?

CONTEXT

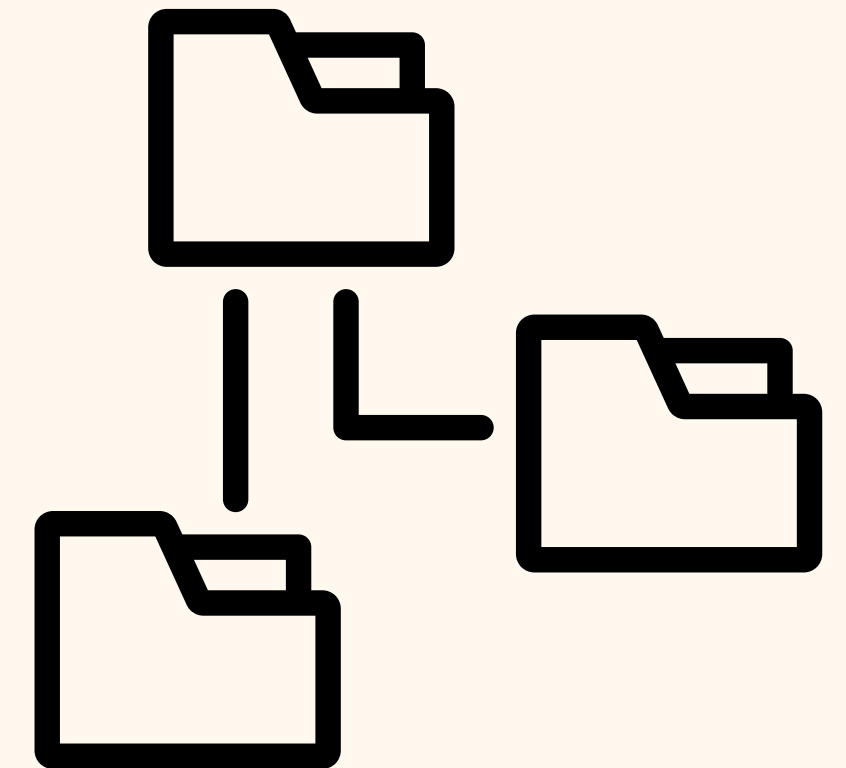

Who Changed it?

WHEN?

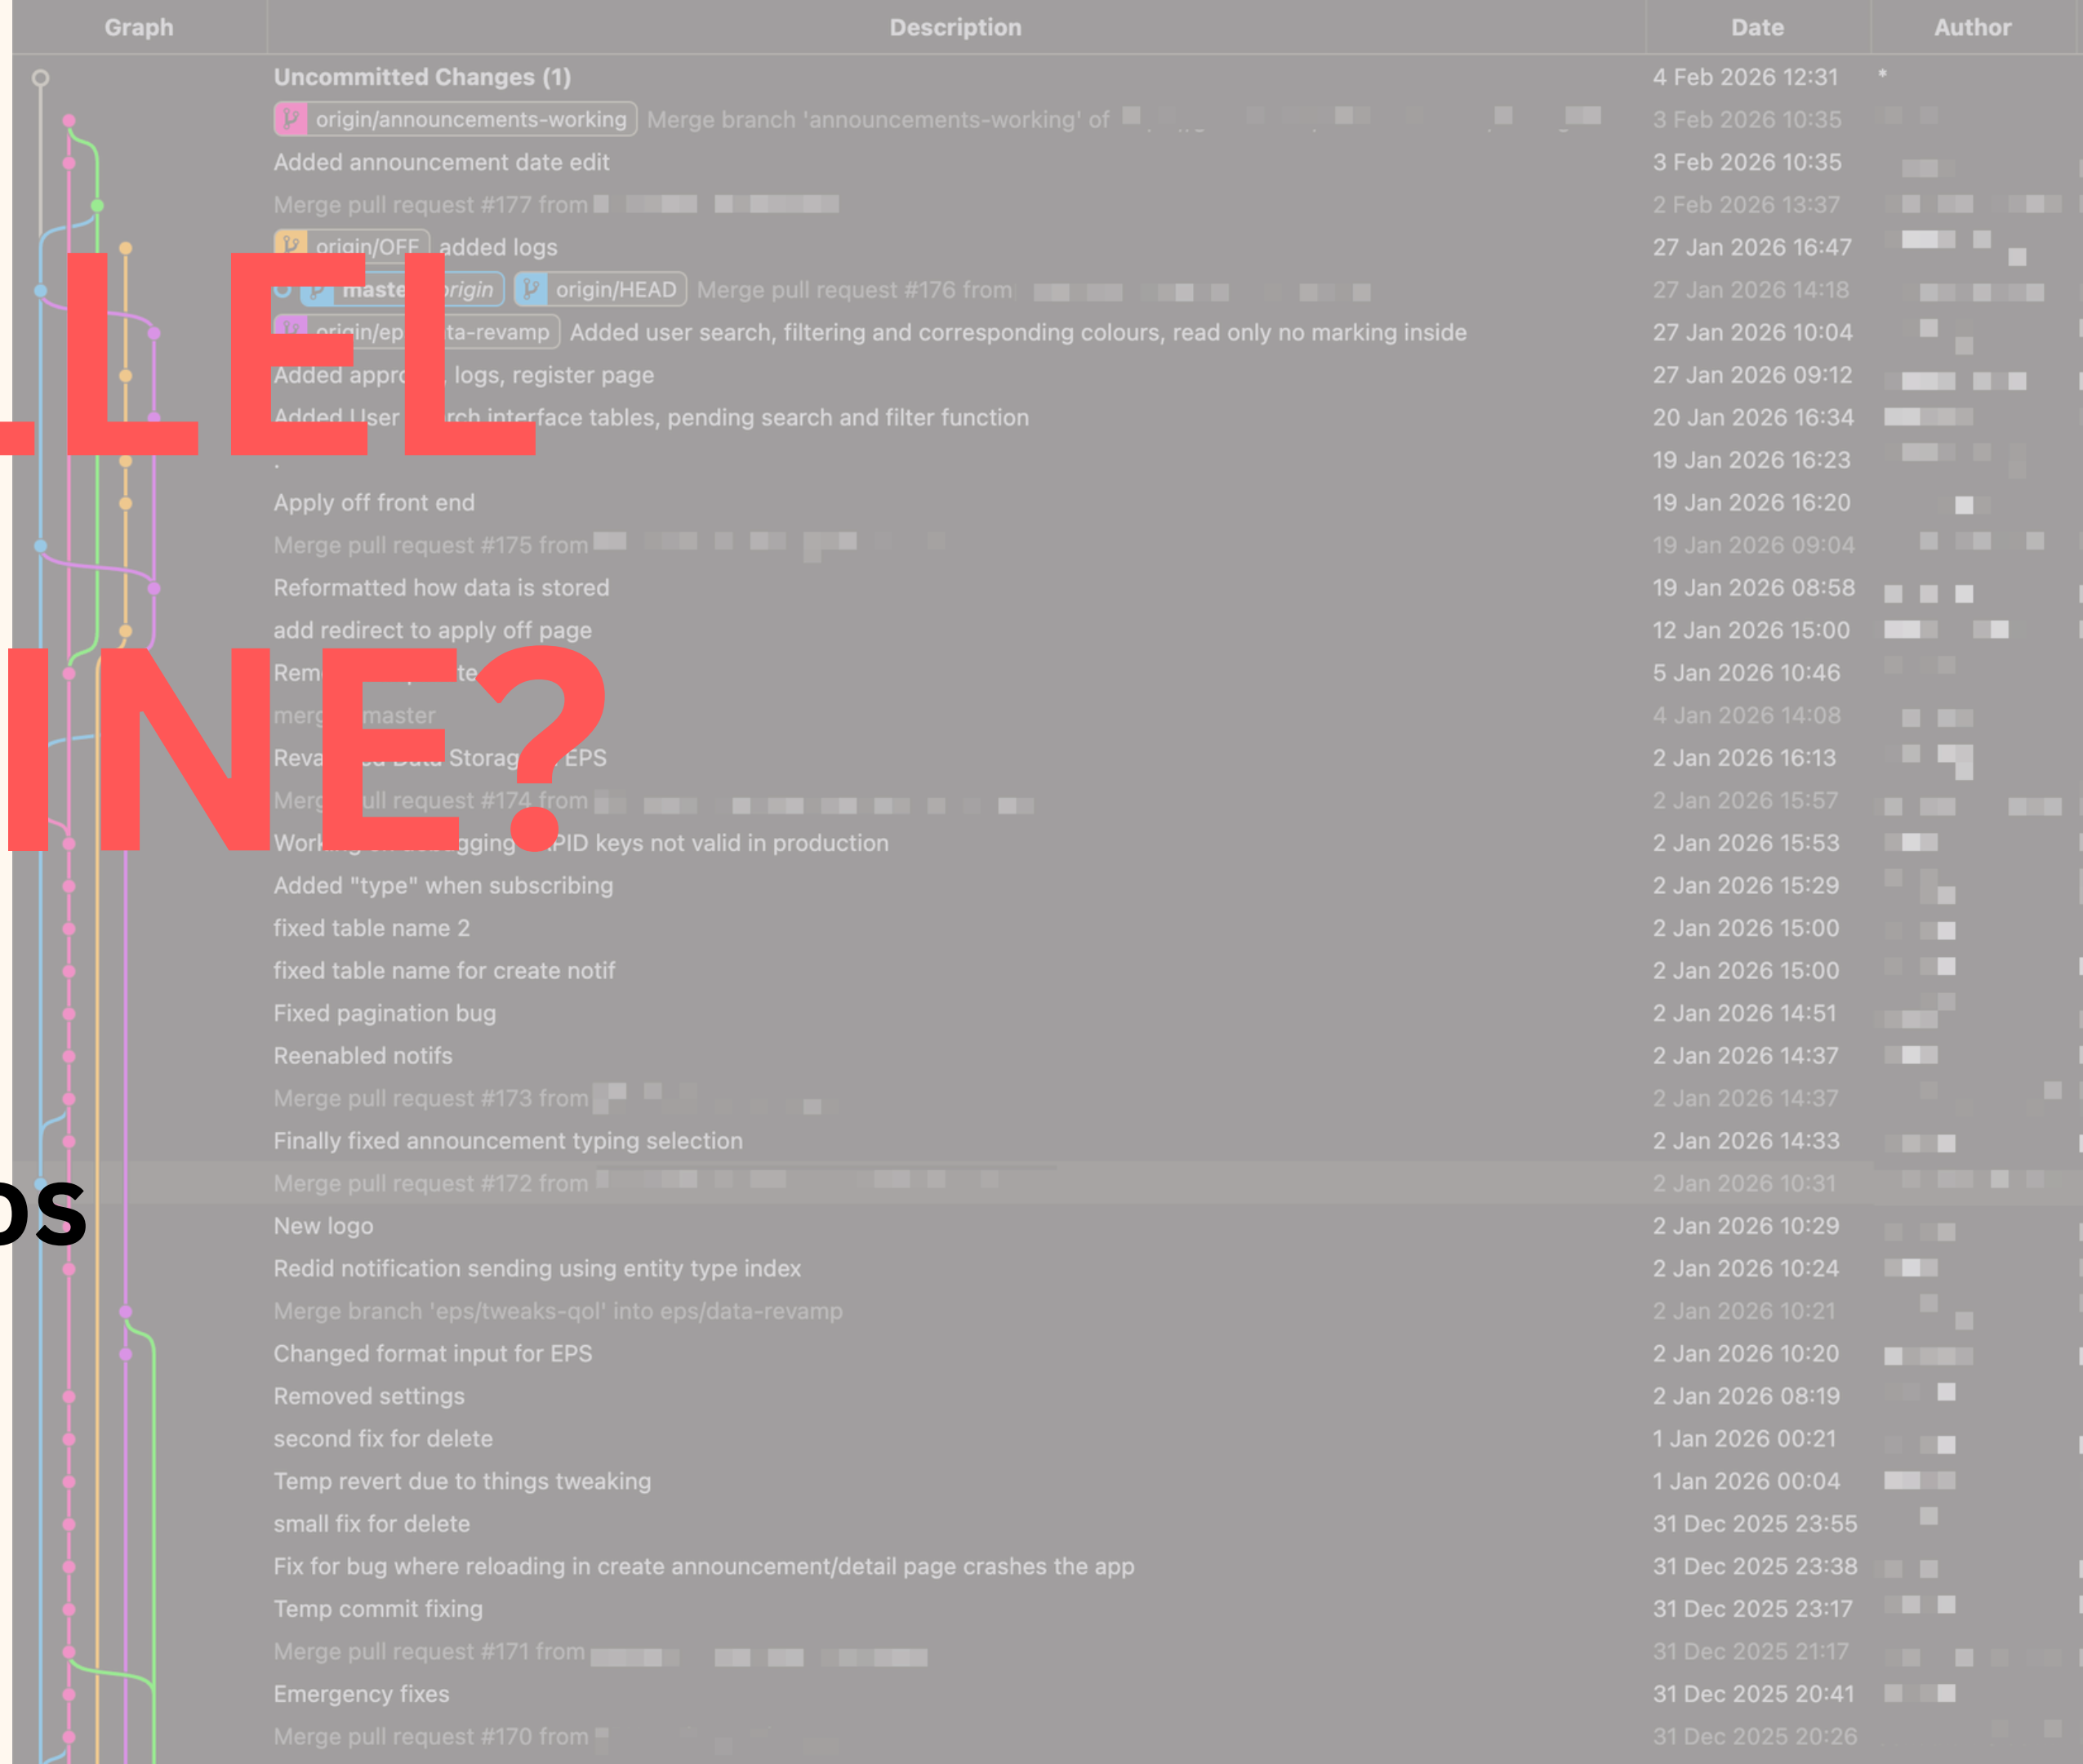

Version Control

- The **EXACT** state of all files
- **WHO** made the changes
- **WHAT** happened
- **WHEN** did it change?
- Description of **WHY**?

PARALLEL TIMELINE?

What If Scenarios

FINAL_VERSION

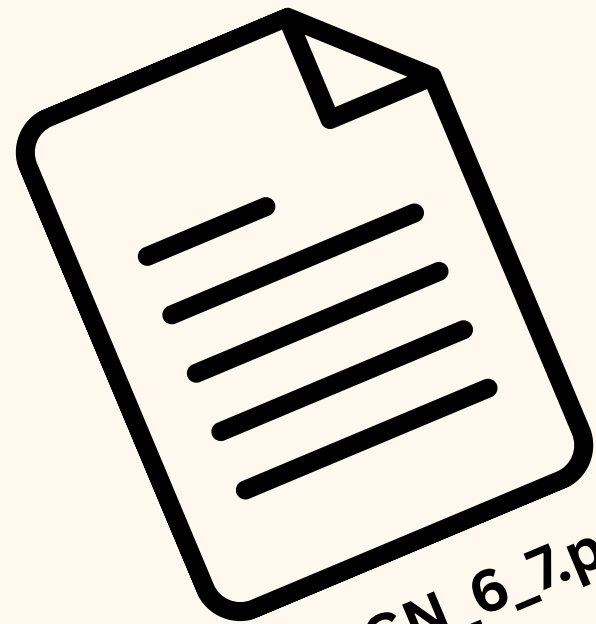

- project.py
- project_final.py
- project_final_FINAL.py
- project_final_FINAL_v2.py
- project_final_FINAL_v2_THIS_ONE.py
- project_final_FINAL_v2_THIS_ONE_actually.py

KMS.txt

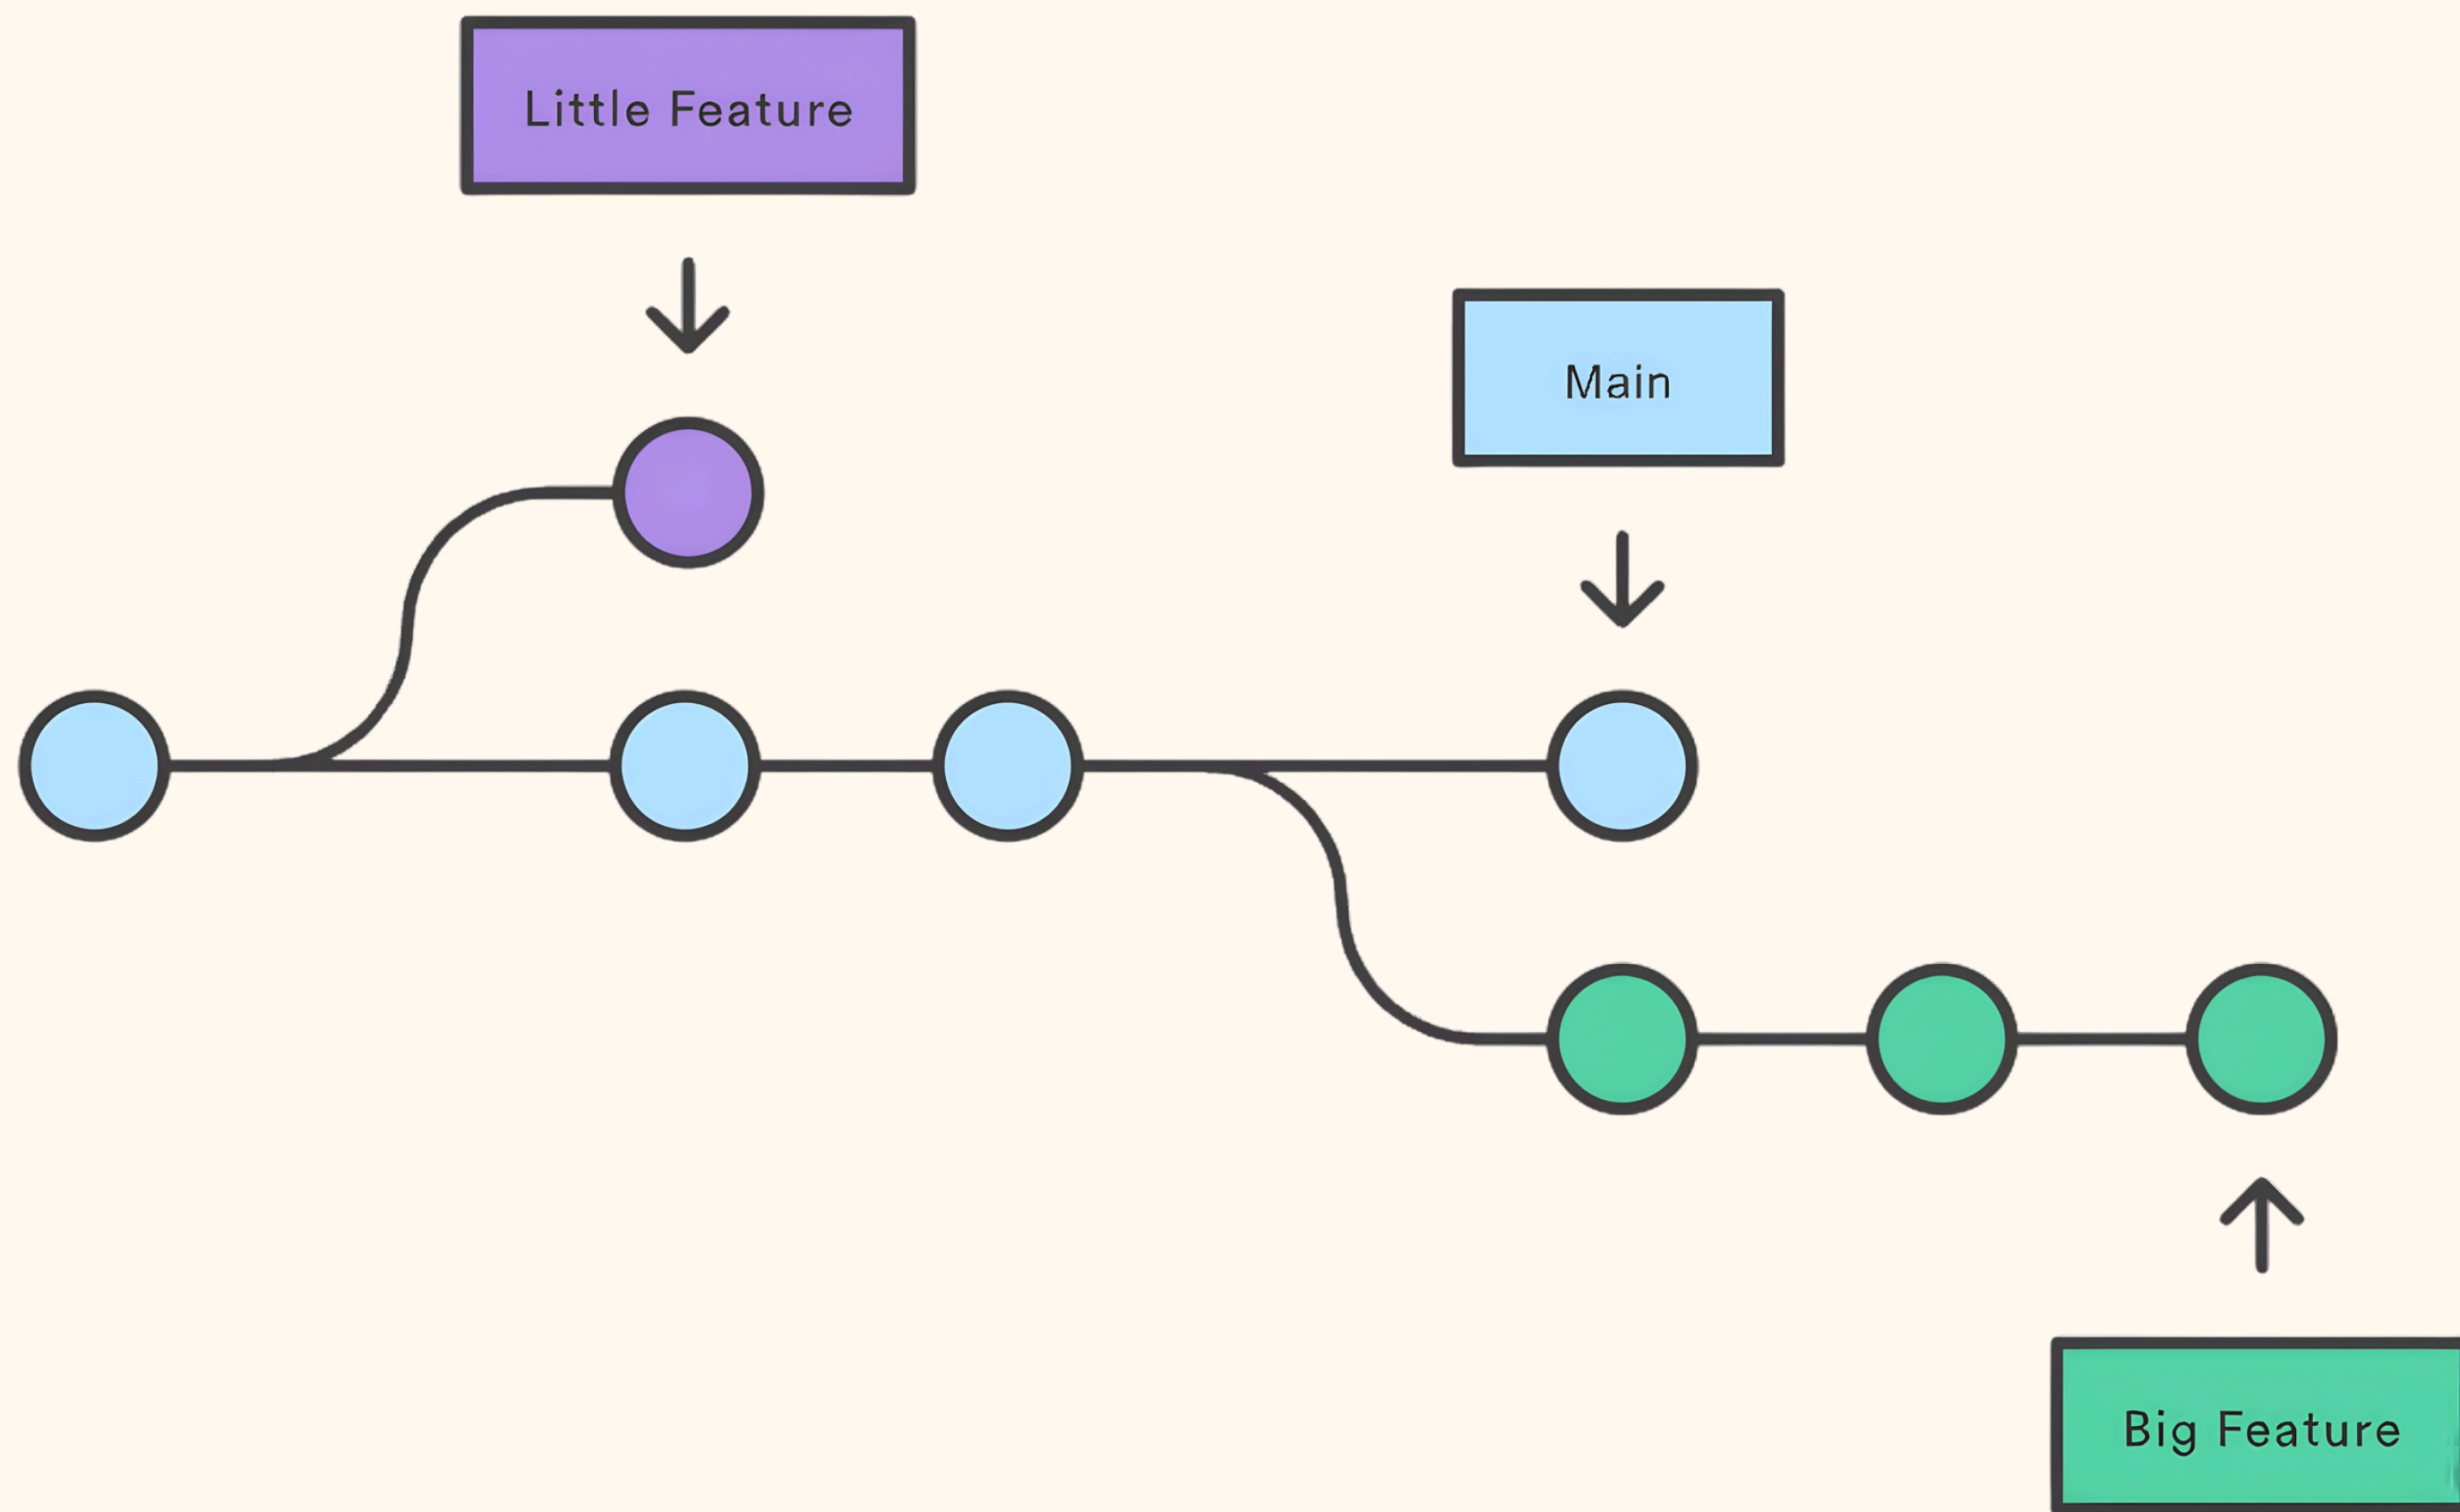

I swear this is
final please.txt

FINAL_FINAL_VERSION

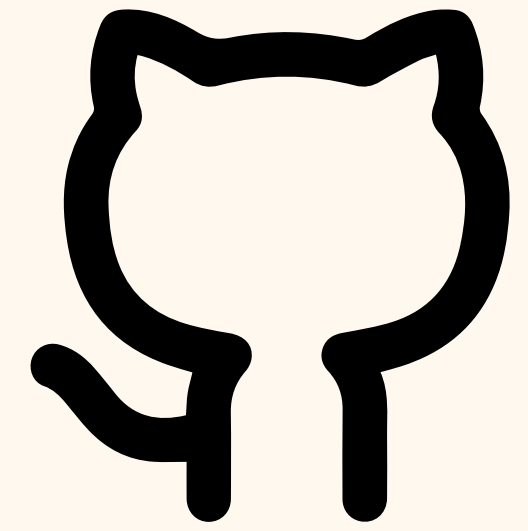

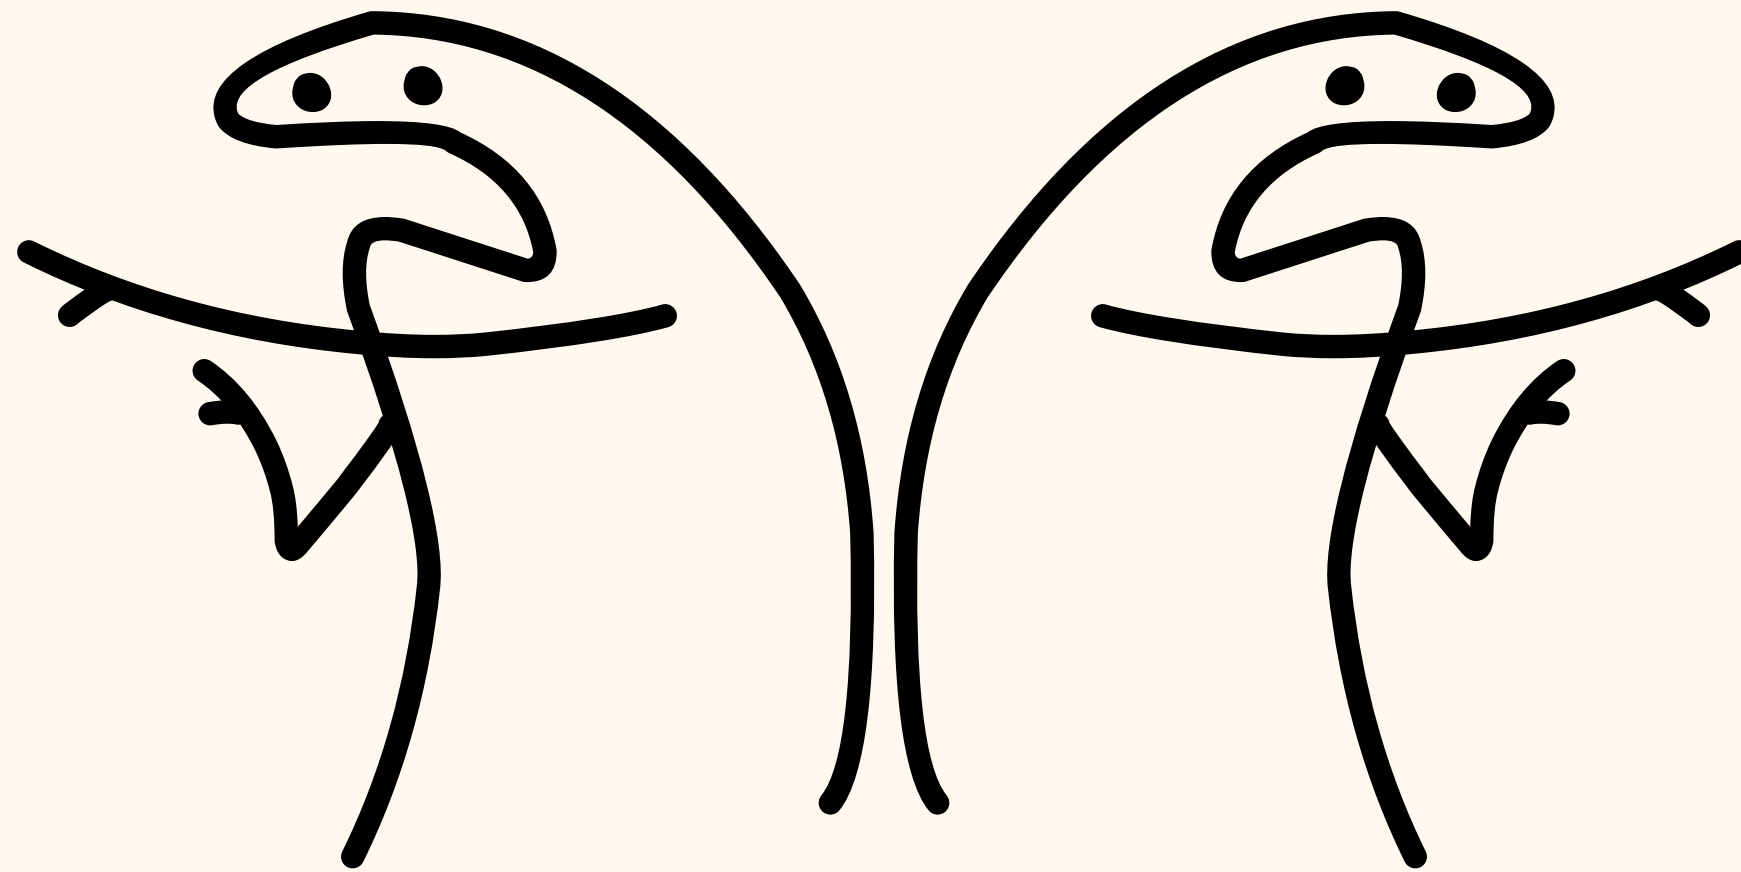

But Why?

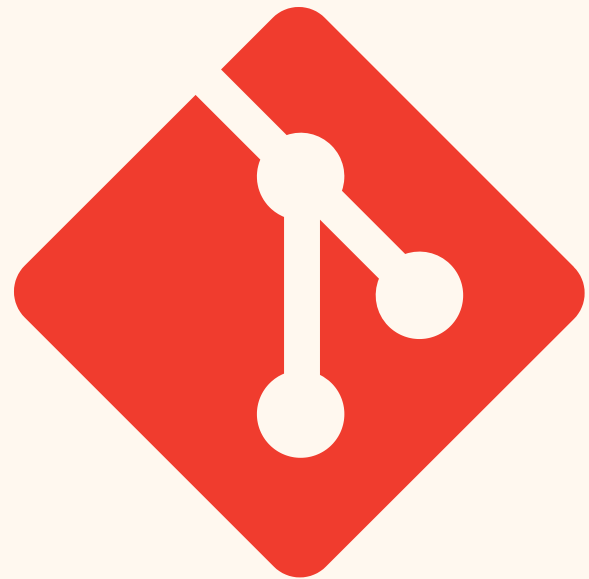

Git

GitHub

What is Git?

Git

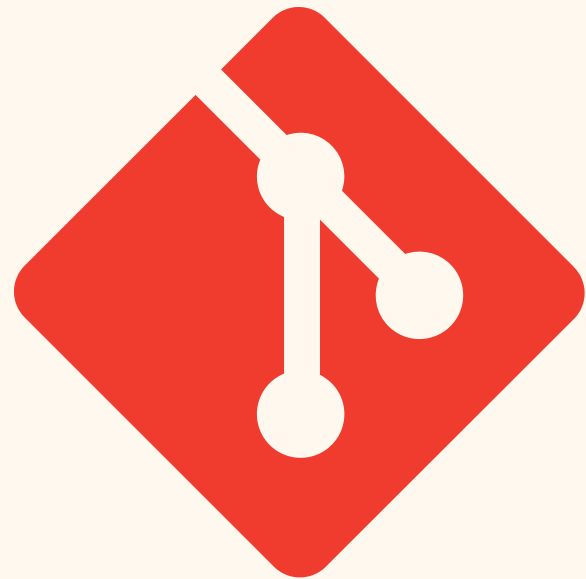

Git is the version control system (like the engine) that helps to track changes to your files on your own machine.

What is Github?

Github is a cloud platform where developers store and collaborate on Git repositories online.

What Git Solve?

Git

- 1. Never lose your work AGAIN!**
- 2. Collaborate without Chaos**
- 3. Complete and Transparent History**
- 4. No more Emailing/Whatsapping
Files**

TERMINOLOGY

Repositories: Folder controlled by git

Add: snapshotting changes to Staging

Commit: Checkpoint existing Snapshot

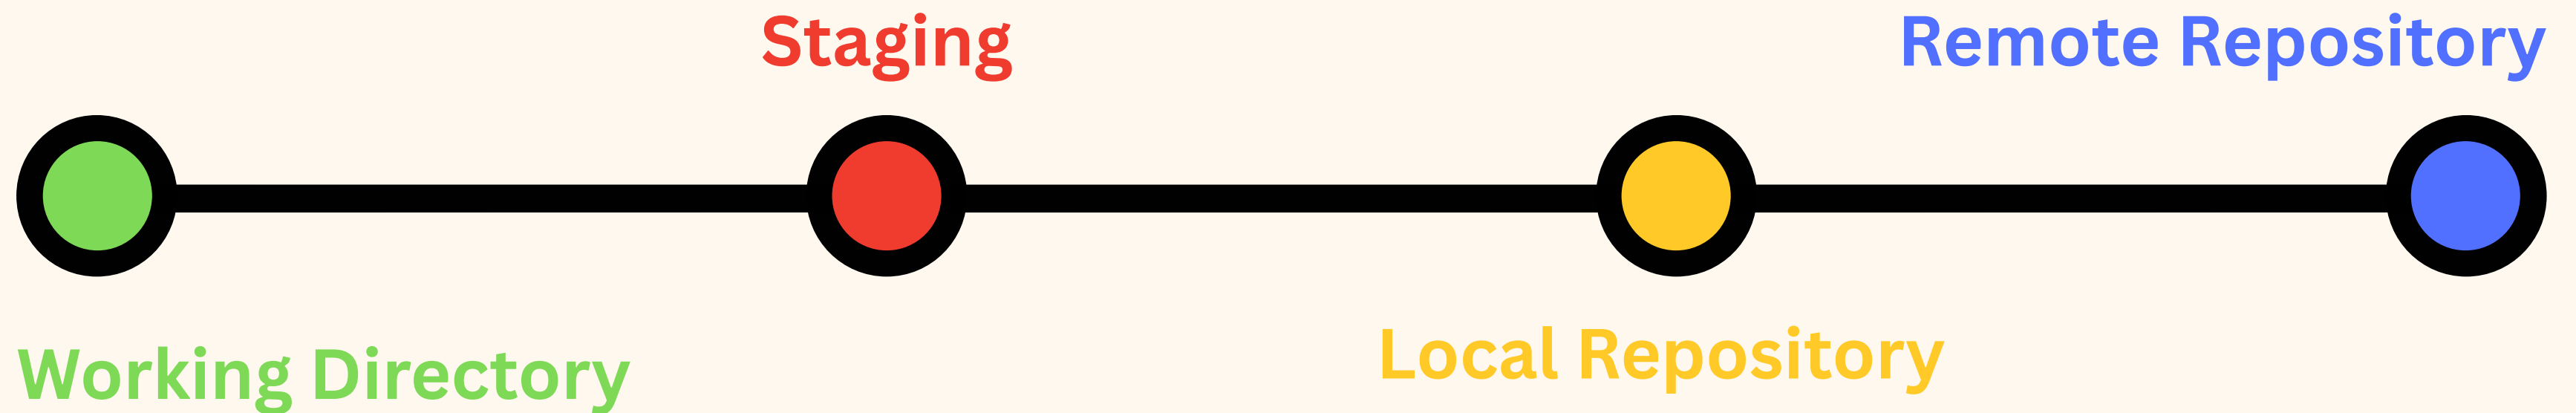

Push: Uploading checkpoints to Cloud

Clone: Download a Cloud repo Locally

How to Git?

4 Stages of Git

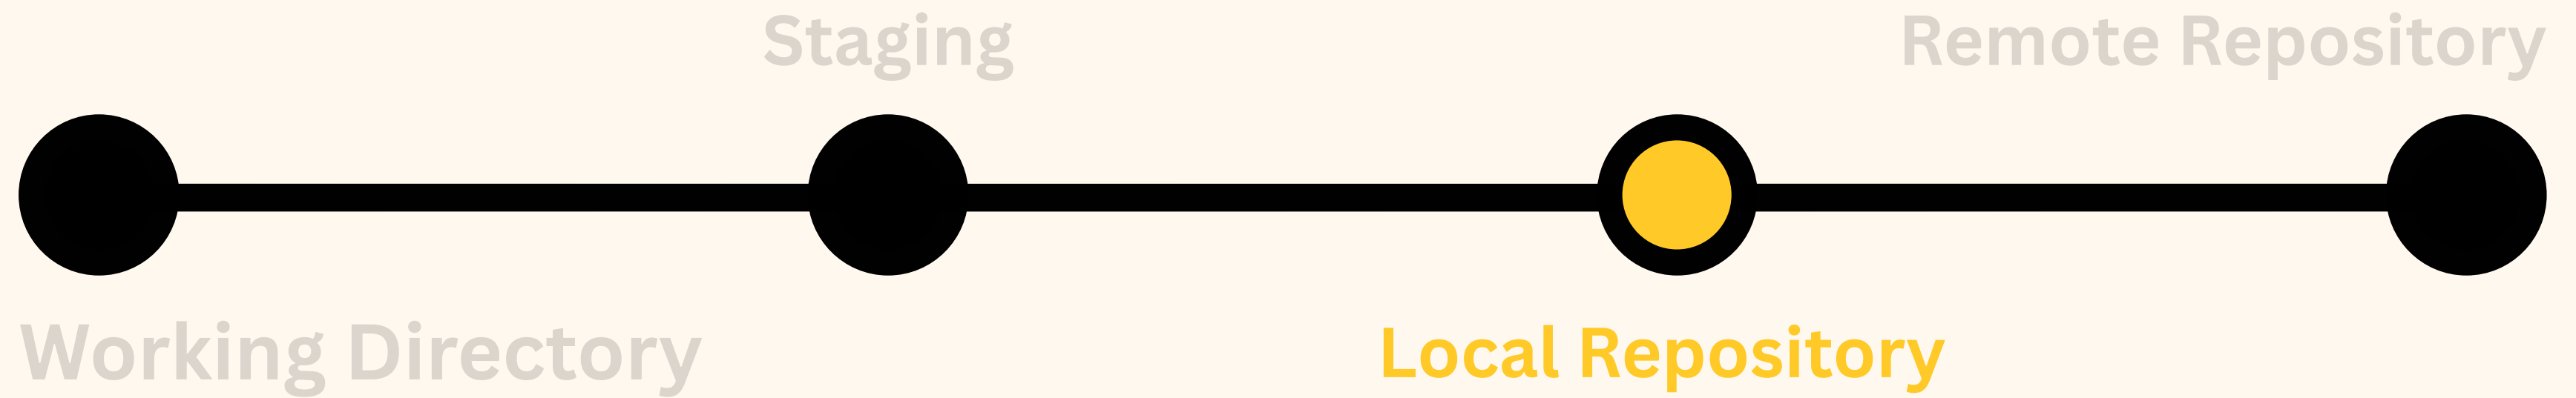

This is your project folder. You edit, create and delete files here.

Staging is your ‘shortlist’. Only staged changes are included in the next snapshot (commit).

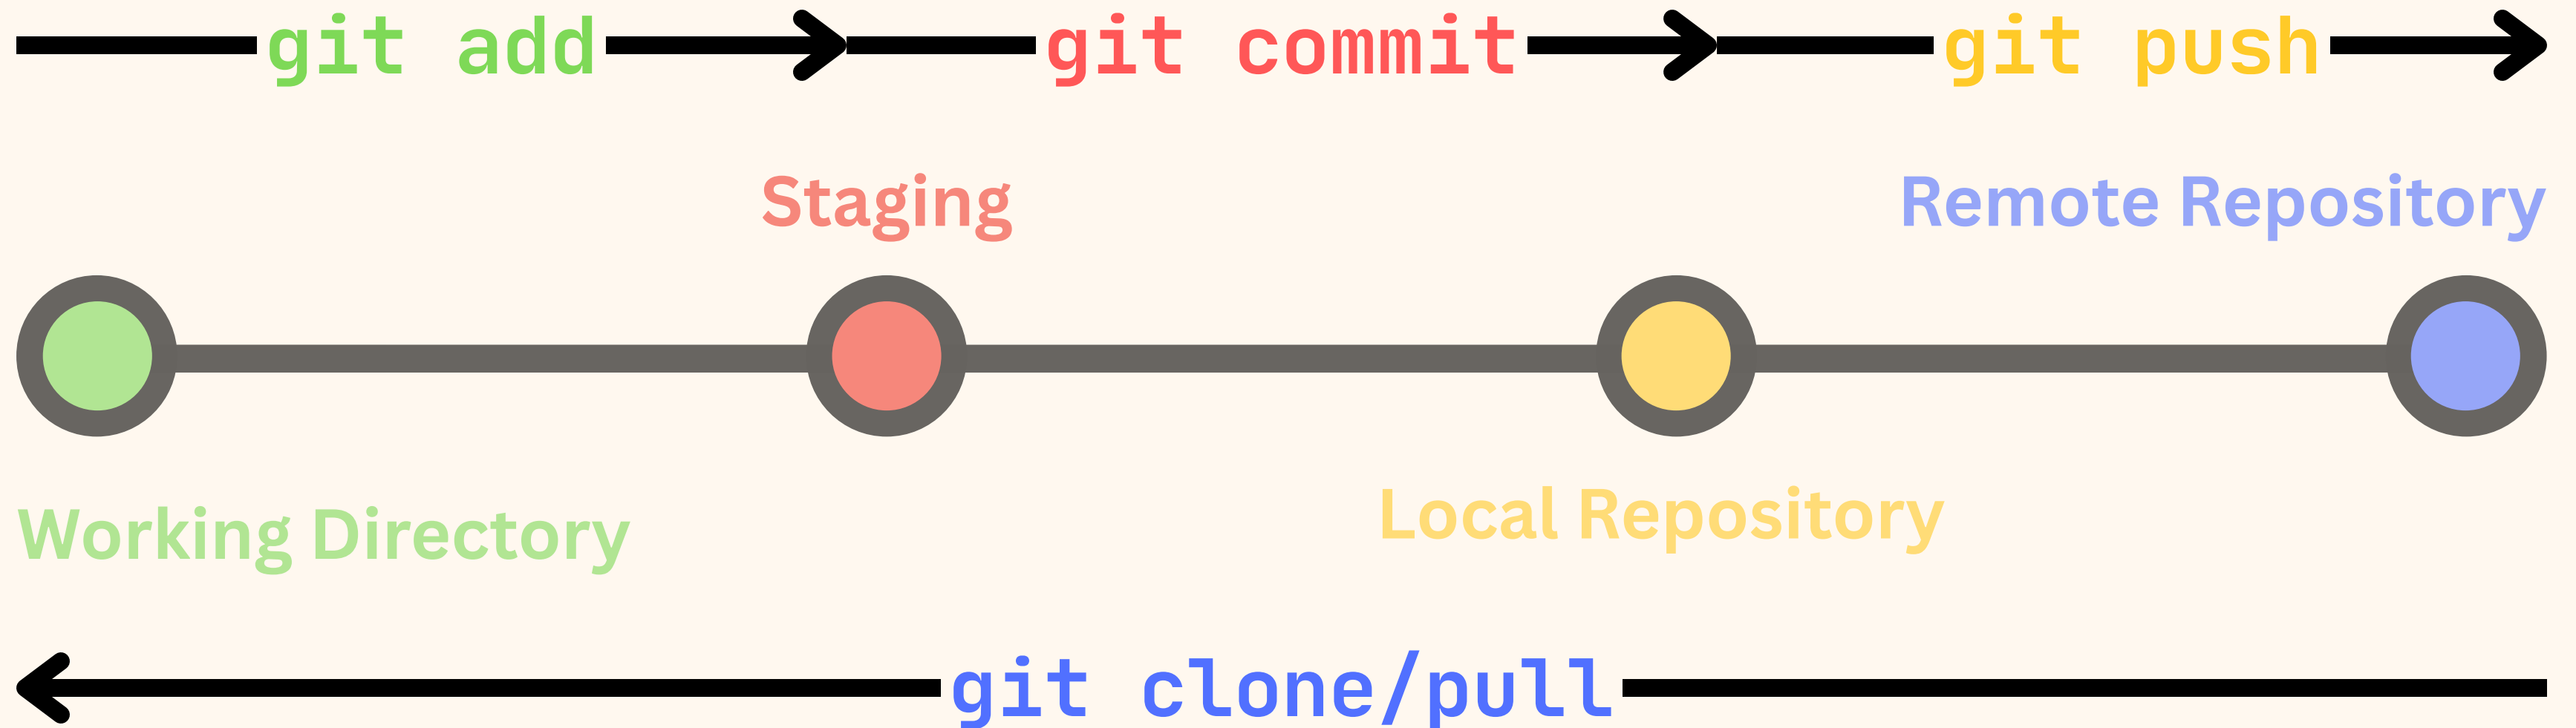

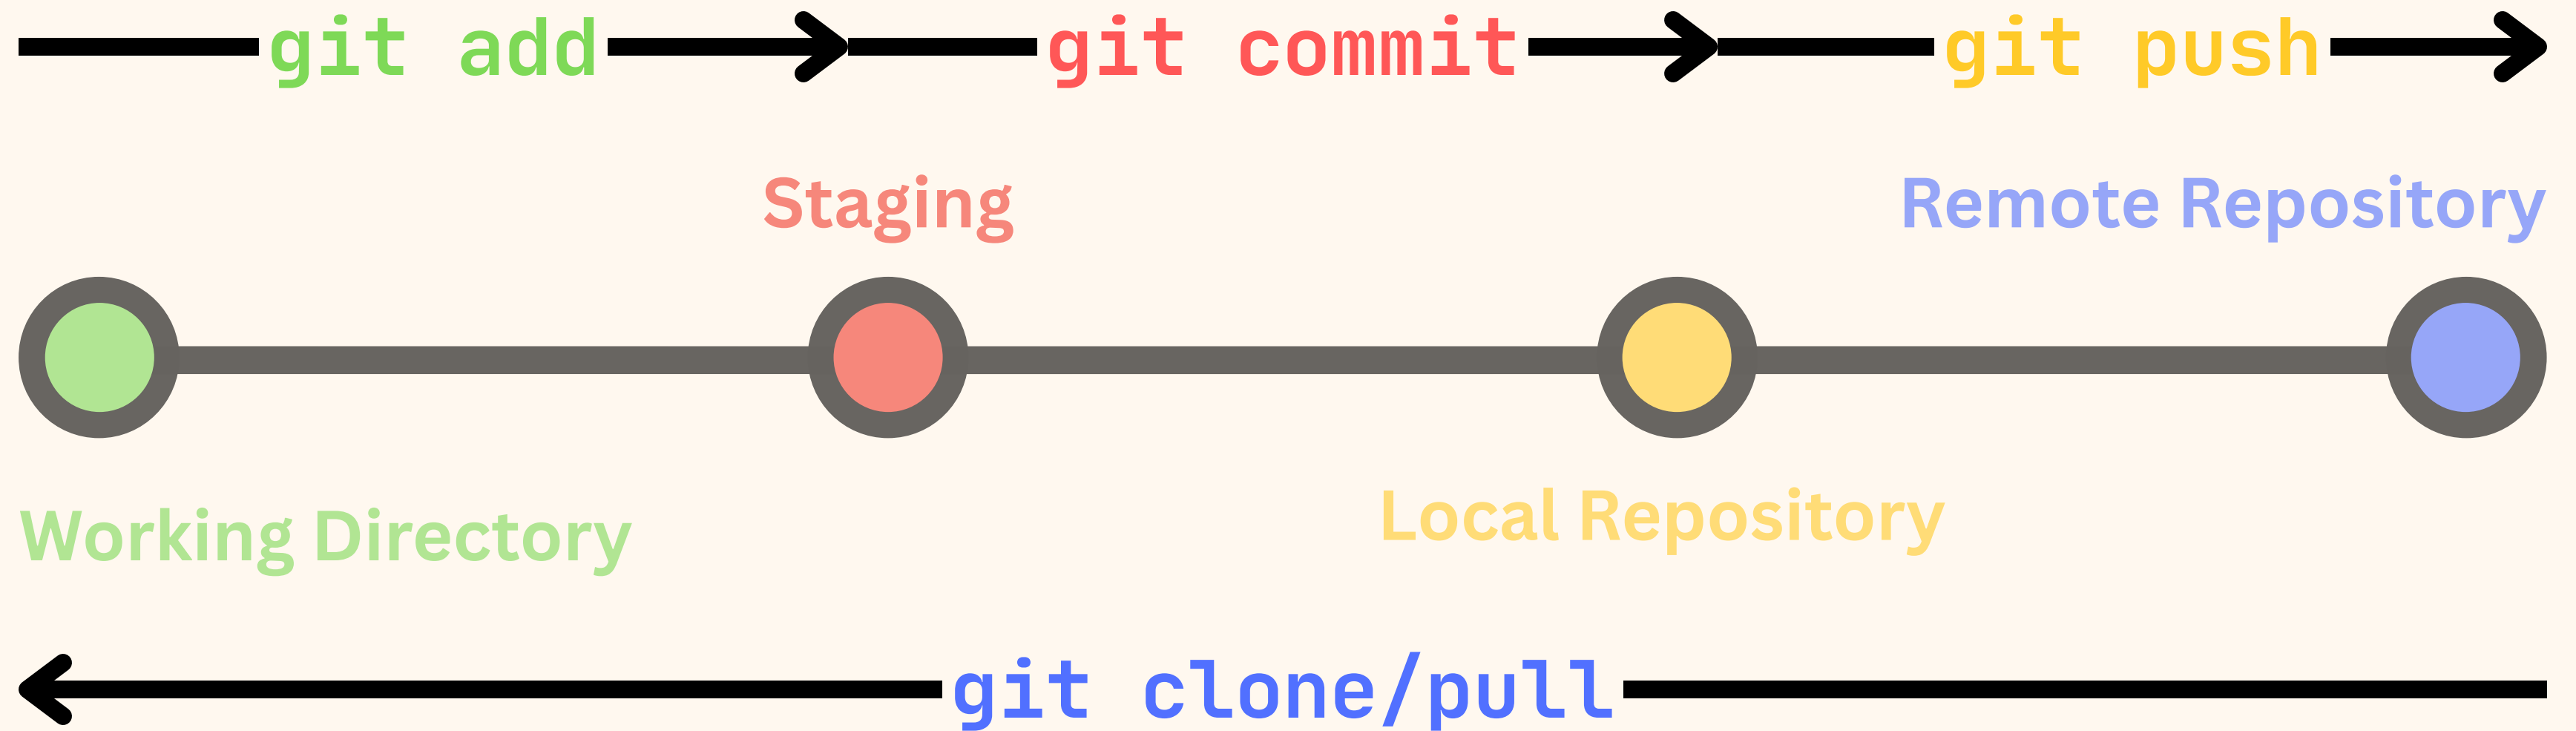

Your local repo is your personal history of commits. It lives in the .git folder on your machine.

Remote repository is the shared copy (e.g. GitHub). You push your commits up, and pull your teammates' commits down.

COMMANDS

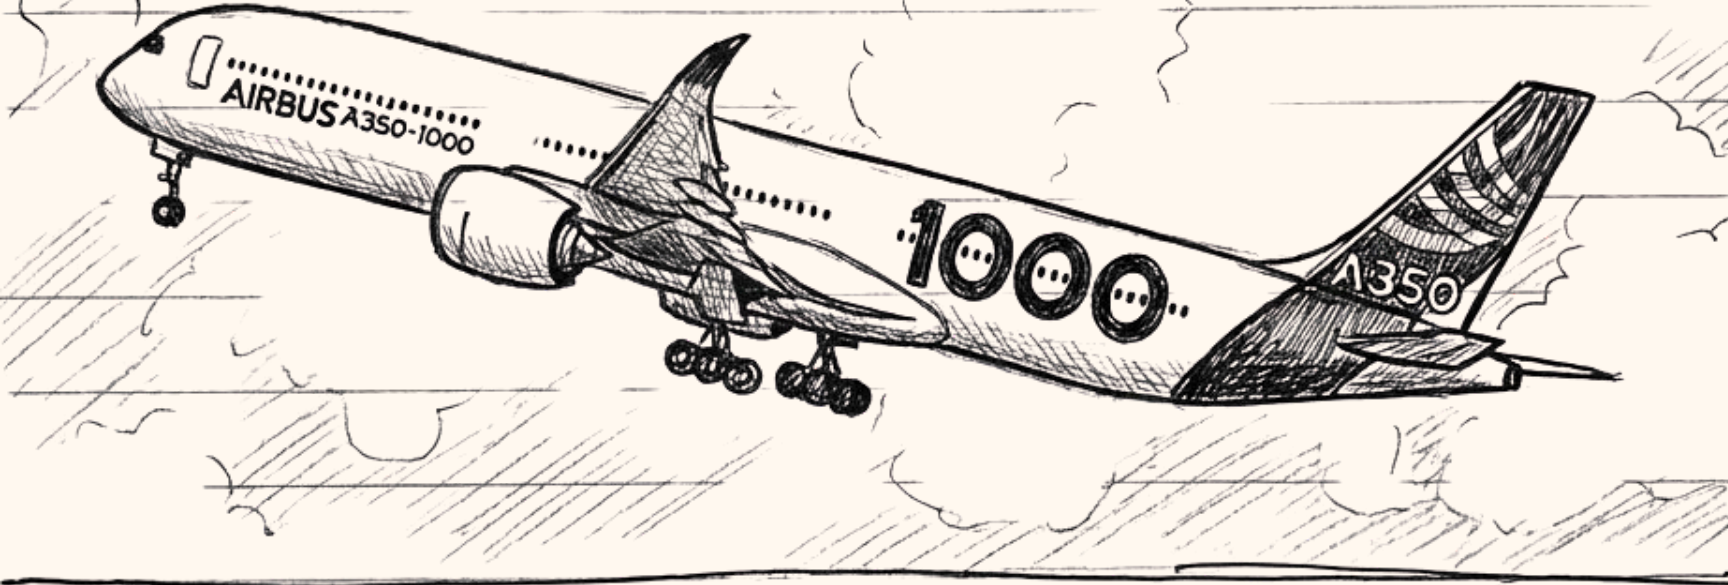

git commit

git push

git add .

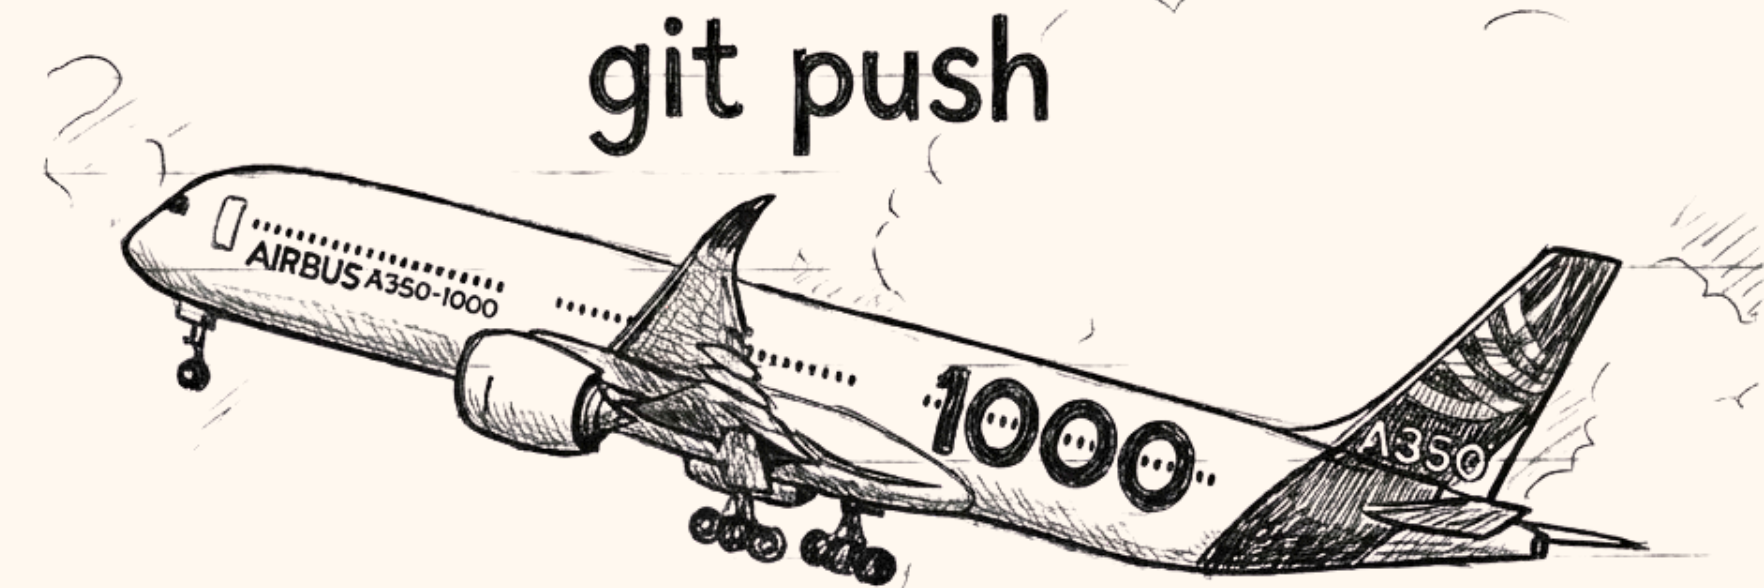

git add .

git commit

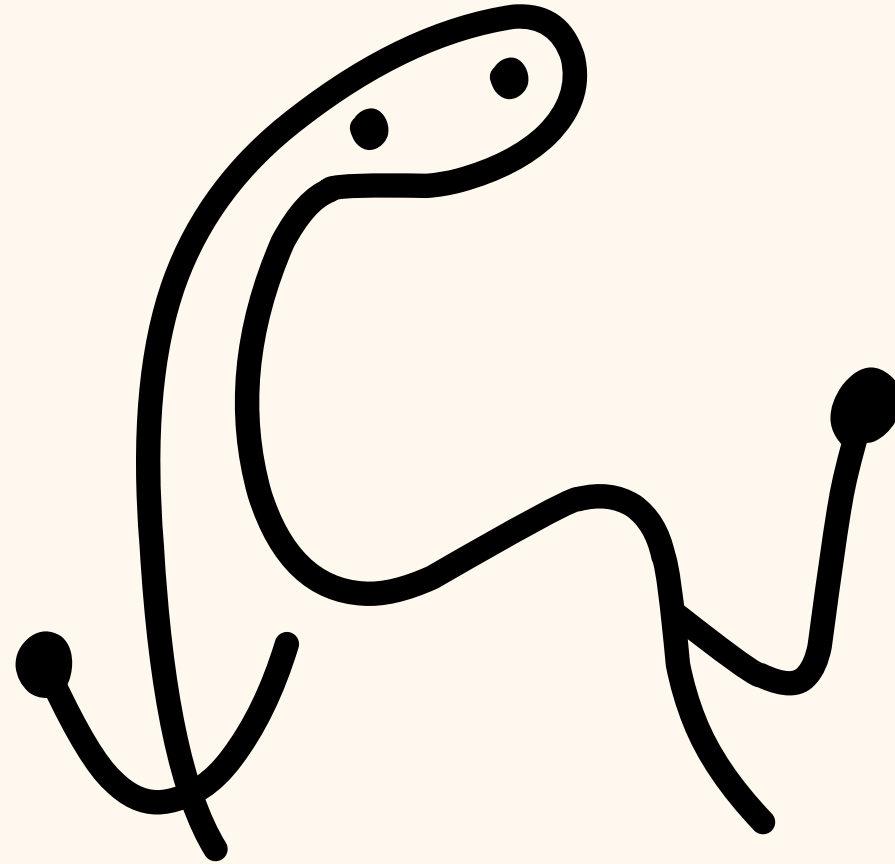

git push

APPLICATIONS

Activity Time ✨🕶️🕶️

THANK YOU!
